

Signed Client Onboarding Agreement

Agreement Ref:	AGR-1
Client Name:	Praveen Mewada
Email:	praveen.mqlus@gmail.com
Final Price:	Rs. 74,150.00
Submitted At:	2026-07-24 16:09:21

Agreement Content

Intro

Welcome to our real REST API - a fully functional service backed by a real database. It lets you send, store, and retrieve data through real HTTP requests, providing an experience much like working with a production backend. Its flexible design allows you to create and manage custom data structures, making it easy to simulate realistic REST API behavior for any project.

Whether you're building demos, testing features, or waiting for backend updates, this API helps you generate and test responses as if everything were already live. It offers both public and authenticated access - the public version is open for quick exploration, while the more powerful authenticated version unlocks extra features, endpoints, and flexibility to shape your own data models and collections - perfect if you want to take things a bit further.

Main HTTP Methods Support

Support all major HTTP methods: GET, POST, PUT, PATCH and DELETE.

HTTPS Support

Secure connections via SSL/TLS for all API endpoints.

Cross-Origin Requests

CORS enabled for all domains, perfect for frontend development.

Flexible Resources Schema

Design any data structures and relationships using nested JSON objects for complete flexibility.

Overridable Status Codes

Authenticated endpoints include an optional feature that lets you override the returned HTTP status code to simulate different responses.

Always Available

99.9% uptime ensures reliable access for testing anytime, anywhere.

Client Acceptance

I, **Praveen**, confirm that I have read, understood, and accepted this agreement.
